CADTALK

CAD/PDM/PLM/BIM Bill of Material (BOM) Transformation

Get to Know CADTALK

CADTALK is a proud IFS solutions partner providing BOM data transformation for IFS Applications. Launched in 2006, CADTALK has more than 1,000 users on 5 continents and processes hundreds of thousands of bills of material, routings, and items for customers annually.

CAD Independent

CADTALK ERP and CADTALK BIM supports and integrates with all major CAD/PLM/PDM/BIM applications. CADTALK can be used by anyone in the organization who interfaces with the BOM process because of its CAD and standalone host options. CADTALK Design for Manufacturing (DFM) provides real time manufacturing data from IFS Applications directly to engineers during design time.

Data Transformation

Artificial Intelligence (AI) powers CADTALK's rules-based engine. This approach stands tall above competitors who require significant implementation and development services costs. CADTALK implementations are fixed costs and require zero customizations with most implementations taking just 8-16 hours.

Simplified Licensing

CADTALK does not require a license for every CAD/PDM/PLM user. Licenses are also floating (not named). User licensing is therefore significantly less than competing products.

CADTALK is a suite of advanced data management applications that leverage cutting-edge artificial intelligence to transform information from engineering and design applications into data inside IFS Applications streamlining processes, connecting systems, and improving workflow across departments.

For manufacturers and aerospace and defense, our flagship product, **CADTALK ERP** leverages CAD data to create inventory items, bills of material, routings and other information inside IFS Applications. **CADTALK NEST** and **CADTALK DA** provide data transformation and automation for popular nesting layouts and CAD design automation.

CADTALK BIM automates the design to build process for construction businesses transforming data between the Building Information Modeling (BIM) CAD systems and IFS Applications.

Help your IFS customers harness the latest technologies to improve processes, eliminate errors, and improve operations by 80% with a return on investment in about two months.

CADTALK saves us a lot of time and effort. We are more productive with the small amount of people that we have and it allows us to reach our targets.

-Les Equipements D'Eriabliere CDL

CADTALK has been an irreplaceable tool in helping us handle a significant increase in the amount of bill of material data we've been required to process over the last several years.
